EDUCATION

Bachelors in Computer Science, *University of Texas at Austin*, May 2021
Minor in Studio Art

TECHNICAL SKILLS

Languages: JavaScript, Python, Swift, Java, SQL, C, C++, TypeScript, HTML, CSS, SCSS, SwiftUI, Clojure

Tools: React/Next.js, Angular, Spring Boot, Django, Flask, Git, AWS, MySQL, Docker/Kubernetes, Robot, Selenium, Linux, Apache, Figma

Practices: Agile Methodologies, Web Content Accessibility Guidelines (WCAG) 2.1, CI/CD, UI/UX Design

EMPLOYMENT EXPERIENCE

Visa, Austin, TX

Senior Software Engineer (March 2023 - Present)

- Currently developing a payment app using React, Spring Boot, and a SQL database that enables merchants to dynamically create URLs to payment portals for individual products, increasing the ease of use for credit card networks in situations where it's not currently convenient to do so.

Software Engineer (June 2021 – February 2023)

- Remediated React Components in the UI library used across Visa to comply with WCAG 2.1 standards and meet contractual deadlines, ensuring full ADA compliance for several Visa applications used by major US banking institutions.
- Upgraded the white labeling functionality in UI library to WCAG 2.1 to ensure the major US banks that use this stay fully compliant with ADA regardless of their customizations. This project involved leading a team of 5 software engineers and driving accessibility, styling, and logic remediations, as well as collaborating with design teams to develop UI/UX solutions.
- Represented company in recruiting events for college students, assisting and mentoring students beginning their career and helped them explore opportunities at Visa.
- Developed UI and DB test automation software with Robot Framework and Selenium that prevented bugs from going into production, reducing potential production incidents, and increasing transaction settlement accuracy to 100%.

Software Engineer Intern (Summer 2020)

- Led a global team of interns with Agile workflows in developing an E-commerce POC that provides a universal curbside system for small businesses to operate with and better connect to customers.
- Designed the UI, developed a React app to dynamically load data from a Django Rest API across 25 endpoints, and embedded Visa's payment system.
- Created a CI/CD pipeline to automate the build and deploy process of the application to AWS.

Schlumberger, Houston, TX

Software Engineer Intern (Summer 2019)

- Researched and implemented a working solution in Angular for building applications into packages and dynamically embedding into a single platform, saving internal teams months of overhead associated with launching new products.
- Created build/release pipeline for deploying packages to private registry on Azure DevOps.
- Developed a UI to allow users to configure their UI in real-time.
- Participated in Agile management workflows such as sprint planning/review and team stand-ups.

PROJECTS

- [abhi.work](#)
 - Developed a responsive website with React, configured an automatic build pipeline, and deployed to AWS using a S3 bucket for storage and CloudFront for global caching.
 - Designed UI wireframes with Figma for both mobile and desktop views.
 - Currently redesigning to improve UX, increase user retention, follow accessibility guidelines, and more effectively present content based on statistical findings from site analytics.
 - Currently porting the site to Next.js to improve site performance, implement static site generation, use dynamic metadata for each page, increase SEO, and follow modern software development practices.
 - Documenting the redesign process in a [YouTube web series](#).
- [bandtogether.events](#) – Built a responsive web app that scrapes public data to build an information portal using modern SWE practices as part of a team using React, Django, PostgreSQL, AWS, Git, Docker, CI/CD, SSL, Selenium, Mocha, and Postman. [github.com/avelaga/band-together](#)
- [subhanjali.com](#) – Designed and developed a responsive portfolio site using React, AWS, Git, CI/CD, SSL, Webpack, Babel. [github.com/avelaga/subhanjali](#)
- *Inside Skoop* – Designed and developed an app that helps students find classes that fit their criteria for both the web and iOS devices using React, Swift, Django, Git, AWS, PostgreSQL, Firebase, InVision, SSL, and Apache. [github.com/avelaga/inside-skoop-ios](#)
- Built a network of Raspberry Pis and Arduinos that control LED strip animations from a web app using React, Flask, C++, Git, and Apache. [github.com/avelaga/room-led-api](#)
- Programmed a graphical evolution simulation, terrain generation, games, and generative art algorithms using Processing.
- Designed, built, and programmed interactive LED installations with C++ and Arduinos for [Fortress Fest](#), [DadaGeek](#), [Maker Faire](#), and [The Swan Dive](#).

INTERESTS

Music - Electric Guitar, Drums, Electric Bass, Vocals, Composition, Recording, and Production. Released three full length recordings and performed in an official SXSW Showcase and several cultural conventions with international audiences.

Photography - Conceptualized, shot, and published two photo series. Featured in *Spark Magazine*, *Rice & Spice Magazine*, and *Renowned Magazine*.

Electronics – Designed, soldered, and built multiple interactive installations with Arduino and ESP development boards. Exhibited at [Fortress Fest](#), [dadaLab](#), [Maker Faire](#), and [The Swan Dive](#).
