EDUCATION

B.S.A. in Computer Science, *University of Texas at Austin* (Graduated May 2021)

Additional concentration of study in Studio Art

TECHNICAL SKILLS

Languages: JavaScript, Python, Swift, Java, C, C++, SQL, TypeScript, HTML, CSS, SCSS, SwiftUI, Clojure

Tools: React, Angular, Spring Boot, Django, Flask, Git, AWS, MySQL, Docker, Robot, Selenium, Linux, Apache, Figma

Practices: Agile Methodologies, CI/CD, UI/UX Design

EMPLOYMENT EXPERIENCE

Software Engineer, *Visa*, Austin, TX (June 2021 - Present)

- Remediated 18 React Components, representing over 60% of our UI Library, to comply with Web Content Accessibility Guidelines (WCAG) 2.1 and meet contractual deadline.
- Led project wide initiative to upgrade white labeling functionality that involved accessibility, styling, and logic remediations to over 50% of library components and collaborating with design teams to design UI/UX solutions.
- Developed UI and DB test automation software with Robot Framework and Selenium that prevented bugs from going into production, reducing potential production incidents, and increasing transaction settlement accuracy to 100%.

Software Engineer Intern, *Visa*, Austin, TX (Summer 2020)

- Led a global team of interns with Agile workflows in developing an E-commerce POC that provides a universal curbside system for small businesses to operate with and better connect to customers.
- Designed the UI, developed a React app to dynamically load data from a Django Rest API across 25 endpoints, and embedded Visa's payment system.
- Created a CI/CD pipeline to automate the build and deploy process of the application to AWS.

Software Engineer Intern, *Schlumberger*, Houston, TX (Summer 2019)

- Researched and implemented a working solution in Angular for building applications into packages and dynamically embedding into a single platform, saving internal teams months of overhead associated with launching new products.
- Created build/release pipeline for deploying packages to private registry on Azure DevOps.
- Developed a UI to allow users to configure their UI in real-time.
- Participated in Agile management workflows such as sprint planning/review and team stand-ups.

PROJECTS

- [abhi.work](#) – Designed and developed a creative and responsive portfolio site to showcase my achievements and projects. Tech used: React, Flask, AWS, Git, CI/CD, SSL, Webpack, Babel, Apache, InVision, Raspberry Pi, Arduino. github.com/avelaga/portfolio
- [bandtogether.events](#) – Built a responsive web app that scrapes public data to build an information portal using modern SWE practices as part of a team. Tech used: React, Django, PostgreSQL, AWS, Git, Docker, CI/CD, SSL, Selenium, Mocha, and Postman. github.com/avelaga/band-together
- [subhanjali.com](#) – Designed and developed a commissioned responsive portfolio site. React, AWS, Git, CI/CD, SSL, Webpack, Babel. github.com/avelaga/subhanjali
- *Inside Skoop* – Designing and developing an app that helps students find classes that fit their criteria for both the web and iOS devices. Technologies used: React, Swift, Django, Git, AWS, PostgreSQL, Firebase, InVision, SSL, and Apache. github.com/avelaga/inside-skoop-ios
- Built a network of Raspberry Pis and Arduinos that control LED strip animations from a web app. Tech used: React, Flask, C++, Git, and Apache. github.com/avelaga/room-led-api
- Programmed a graphical evolution simulation, terrain generation, games, and generative art algorithms using Processing.
- Designed, built, and programmed interactive LED installations with C++ and Arduinos for [Fortress Fest](#), [DadaGeek](#), [Maker Faire](#), and [The Swan Dive](#).

INTERESTS

Music - Electric Guitar, Drums, Electric Bass, Vocals, Composition, Recording, and Production. Released three full length recordings and performed in an official SXSW Showcase and several cultural conventions with international audiences.

Film Photography - Conceptualized, shot, and published two complete photo series. Featured in *Spark Magazine*, *Rice & Spice Magazine*, and *Renowned Magazine*.

Design - Designed UI and UX for web and iOS applications.

Electronics – Designed, soldered, and built multiple interactive installations with Arduino and ESP development boards.
